# ML-FR4 RETROFIT BACK-WATER VALVE

**Save Time and  
Money with the  
Plumber's Best  
Choice for Retrofit  
Installation!**

Model  
ML-FR4

Normally open  
backwater valve

## Why choose the ML-FR4 for your next Retrofit installation?

1. Unlike other valves this valve has a minimal fall 3/8" through the body which means it's easier to install.
2. Simply cut out enough pipe for valve and simply drop in and connect to plumbing system. This can be done in as little as 24" of excavation, if utilizing existing building cleanout.
3. All other valves have greater falls through the body and require at least 4-5 feet of concrete breaking just to make up the fall through the body.
4. NO 2-foot rule as in other valves.

### SAVINGS

- » While initial costs may seem higher in the initial valve purchase, you will find unsurpassed savings in the ease of installation with much less concrete breaking.
- \*Installs in half the time required by other valves.

### Other Features:

- » Spigot ends allow for easy-installation
- » Gate and hinge are elevated - away from sewage environment
- » Clear view allows for quick visual installation

ML-FR4 IN CLOSED POSITION...  
PREVENTS SEWAGE BACK-FLOW
